# Moderna

new car 2015

EP has chosen to focus on the renewal, the aim is to provide our customers with a more improved product, both in terms of aesthetics and functionality.

The design will be minimalist in shape but not trivial, the new Moderna lift car combines strength, endurance, easy assembly and design without quitting to highly customizable equipment.

## + FUNCTIONAL

### Reduced footprint = larger cars

Wall thickness has been reduced to 25 mm. In addition the car assembly allows the use of reduced gaps.

### No rabbet = bigger doors

Without the car rabbet the clear opening of the door is equal to the car width.

## + EASY TO INSTALL AND SAFE

Moderna can be entirely mounted from inside (you will need to tighten a few screws under the floor). This facilitates and speeds up the assembly phase and ensures the highest level of safety for installers. The light curtain sensor has been placed between the threshold of the car and that of the landing further increasing the current safety standards.

# Moderna

## + RATIONAL

Moderna has been designed and developed to simplify the entire process of production, from each single order to the sheet folding arriving to the packaging passing through the management of material.

**All the above means improvements of our quality standards.**

## + BEAUTIFUL

Moderna, following the current stylist trend, has a linear and clean design, minimalist but very nice.

- Flush finishing's (COP and angle uprights).
- Minimal skirting and horizontal frames.
- Panoramic or mirror wall without the section divider
- Walls and ceiling are available in the same materials offering a pleasant homogeneous environment.
- The external covering of the car (if present) can be chosen from those available for the walls.

The wide choice of finishes and fittings does not mean there are limits to the customization and adaption to each building and for every taste.

*Full height flush COP*

*Panoramic wall*

*Rubber bubbles flooring*
